Five Checks for Every AI Task

1. **What specific task should AI take on for us? And can we be completely sure that it makes sense to entrust this particular task to AI?**

2. **What information does the AI draw on, and is it up to date?**

3. **What may the AI prepare or trigger without asking?**

4. **Which of the AI's statements (such as figures, dates, or facts) can we back up with reliable sources, and what still needs to be checked?**

5. **Which person decides before the AI's draft has a real effect on the outside world?**
